

OFFICER GUIDE

Using The Ring of Ravens Roster

I. INPUTTING FULL-COMPANY ATTENDANCE

1. Open [the attendance form](#). If you do not have access to respond, ping Canary.
2. Fill out the form.
 - a. Add the session title (make sure to capitalize).
Include something descriptive (not just “TRAINING”).

Session Name *

(INTERMEDIATE GROUND MOVES, ADVANCED AERIAL ROUTINE, the more descriptive the better)

BEGINNER AERIAL TRAINING

- b. Mark the date of the training.
It's helpful to click on the date icon and find the date that way.

Session Date *

Date

mm/dd/yyyy

- c. Choose the host from the dropdown list.
If you do not see the host's name on the list, ping Canary.

Host *

Skyline

- d. Fill out attendance the way you would submit attendance on Discord, one name at a time, separated by a new line. Do not include the host's name, as that is recorded in the Host section above.

Make sure each name is spelled correctly. If a name is entered incorrectly, the attendance will have to be verified manually.

Attendees *

Double check each name is spelled correctly. List each name like:

Skyline

Hellbound

Brimstone

Your answer

- e. Select ☒ to mark the attendance as counted (all soldiers receive a point for attending the session).

Counted? *

☒ if attendance points are added, ☐ if they're not.

☒ ☒

☐ ☐

- f. Click 'Submit'.

3. Verify that attendance was added to [the attendance sheet](#) (scroll all the way down).

II. INPUTTING RP / RECRUITMENT PARTY ATTENDANCE

1. Open [the attendance form](#). If you do not have access to respond, ping Canary.
2. Fill out the form.
 - a. Add the session title (make sure to capitalize).
If this is a regiment training, **include the specific regiment's name.**
Otherwise the website will not recognize it as a regiment training and will not award regiment points.

Session Name *

(INTERMEDIATE GROUND MOVES, ADVANCED AERIAL ROUTINE, the more descriptive the better)

NAVY SAILING RP|

- b. Mark the date of the training (images for b, c, and d in Section I).
- c. Choose the host from the dropdown list.
- d. Fill out attendance the way you would submit attendance on Discord.
- e. Select  to mark the attendance as not counted (only the host receives a point for hosting the session).

Counted? *

 if attendance points are added,  if they're not.

- f. Click 'Submit'.
3. Verify that attendance was added to [the attendance sheet](#) (scroll all the way down).

III. GET TO KNOW THE SPREADSHEET TABS

SESSIONS

When attendance is submitted through the form, the answers are recorded in the *Sessions* tab. The columns include a timestamp of when the attendance was submitted, all of the form answers, and two more columns:

Form_Responses								
Timestamp	Session Name	Session	Host	Attendees	Counted	Rankups	updated	
6/1/2026 22:28:45	AIRSHOW TRAINING	5/25/2026	Fenix	Kestrel Lammergeier Callie Sinopia Kite Citation Canary Arcus Euchlorite Imperial	✓		1	

The “updated” column is used by a Google Apps Script to track which sessions have been recorded in the *Soldiers* tab. This column is locked from editing. If someone removed the 1’s in this column, the script would add all the points again (BAD).

This is also where the sheet catches errors. The script looks at the host and attendee names, and if it cannot find a match for a name it will halt all processing and mark a 0 in the “updated” column. It will also make a note of the unmatched names. In this example, Dahilia’s name is spelled wrong and Shadeliner left the server:

updated	
0	Unmatched names: Dahila, Shadeliner

In this case, the attendance would have to be manually verified by Canary, which is why it is very important to be certain that the attendee names are correct.

The “Rankups” column tracks soldier rankups. If a soldier reaches a point threshold to rank up, they are added to the list of rankups so the website can display them.

SOLDIERS

The *Soldiers* tab is the most similar to the official roster. It contains id, name, points, title, regiment, and status. It also combines the regiment roster and includes regiment points.

id	name	points	title	regiment	regiment_title	regiment_points	status	last_session	join_date	2+ inactive?
<@9078285067	CANARY	91	CWO-2	Navy	Commodore	0		8/23/2026	8/16/2025	

It also includes three columns which track activity automatically. Last_session gets updated when someone submits a form. The script looks through the soldiers, updates their points, and marks last_session with the most recent session date.

Join_date is manually entered when a soldier enlists. The “2+ inactive” is an uneditable column which turns red if the last_session (or join_date if there’s no last_session) is longer than 2 years ago.

The status only has a dropdown for On Break or Retired, because activity is automatically calculated based on the join_date and last_session. If the most recent session they attended is greater than 6 months, they are considered semi-active. If it is greater than a year, they are considered inactive.

LEFT SERVER

The *Left Server* tab contains a history of soldiers who have left the server. They are recorded here so if a new soldier enlists under the same name, the old names can be edited so the new soldier does inherit their session history.

For instance, Summit has left the server. If a new soldier enlists under the name Summit, the *Sessions* tab must be updated to change all instances of “Summit” to “Summit_” and the old Summit’s name is changed to Summit_. This way all previous attendance is tied to Summit_, leaving Summit with a clean point history.

OFFICERS

The *Officers* tab is an internal tool which shows all officer and regiment officer attendances hosted over the past 30 days. The Google Apps Script recalculates point totals per host when the attendance form is submitted.

This tab is designed for officers to review their own attendances, and may not be shared outside leadership. Do not compare your own attendance count to others.

OFFICER RANKUPS

The *Officer Rankups* tab holds all rankups and dates so the website can display them. Officer rankups are displayed manually because there's no set point level to achieve a certain officer rank.

SOLDIER AND SESSION ARCHIVE

These two tabs hold a regularly-updated archive of the *Soldiers* and *Sessions* tab. These archives are in place to restore the live tabs in the event their data is unintentionally corrupted (e.g., a recruitment party is marked as giving full points to all soldiers), or intentionally corrupted (e.g., a bad actor gains access to an email and removes all soldiers). This is highly unlikely, but better to be safe than sorry.

The Archive tabs are locked from editing. Ping Canary if there's an issue.

RANKS AND REGIMENT RANKS

These two tabs hold all the ranks, abbreviations, and points to reach the rank. They are ordered lowest to highest, so the website knows the hierarchy of ranks (e.g., General is higher than Colonel because it's lower on the sheet). The point threshold is used by the Google Apps Script to determine rankups.

The Ranks tabs are locked from editing. Ping Canary if there's an issue.

IV. THE WEBSITE

This section will eventually link to a document explaining how the website works and how to use it, but it's currently not completed. In the meantime, check out the changelog on [the website](#) to learn about several features and an overview of how the whole system works.

Thank you for reading! Let me know if you have any questions or suggestions (or just want to chat). Many of the new features came from your ideas!
